## Kingston Rule-1 Well Delivers 53m of Net Gas Pay

---

Orca Energy Limited (ASX: OGY) is pleased to provide an update on the Kingston Rule - 1 well being drilled in License PEL 115 in the Cooper Basin, South Australia (OGY 20%). The Company is pleased to confirm the following highlights:

- **The Kingston Rule-1 unconventional gas exploration well was spudded on 21 October 2012 and reached total depth of 2,872 metres on 21 November 2012**
- **The well has intersected a total of 53 metres of net gas pay, with 9 metres of pay in the Epsilon Formation shales and 44 metres of pay in the Patchawarra Formation tight gas sands.**
- **The well also intersected 150 metres of shale and close to 20 metres of gas charged coal with mud logs confirming the presence of liquids rich hydrocarbons.**
- **Kingston Rule-1 is being cased and suspended for fracture stimulation and production testing in early 2013.**
- **The well was drilled by JV partner and operator, Senex Energy Ltd (ASX: SXY) with Orca Energy being free carried.**

The attached release from Senex Energy Ltd provides further detail.

Commenting on the news, Greg Bandy, Executive Director of Orca Energy said *"We are exceedingly pleased with the results from Kingston Rule-1 so far and commend Senex for having drilled the well safely, ahead of schedule and to budget. We look forward to the testing early next year which will hopefully confirm the unconventional gas potential in the permit."*

## Kingston Rule-1 unconventional gas exploration well delivers 53 metres of net gas pay

Release Date: 29 November 2012

**Senex Energy Limited (Senex) is pleased to report, on behalf of the PEL 115 joint venture, that the Kingston Rule-1 unconventional gas exploration well has delivered 53 metres of net gas pay from the tight gas sands of the southern Cooper Basin as well as 170 metres of shale and coal.**

### Key points

- Senex spudded the Kingston Rule-1 unconventional gas exploration well on 21 October 2012 and reached total depth of 2,872 metres on 21 November 2012.
- The well intersected a total of 53 metres of net gas pay, with 9 metres of pay in the Epsilon Formation and 44 metres of pay in the Patchawarra Formation tight gas sands.
- The well also intersected 150 metres of shale and close to 20 metres of gas charged coal.
- Mud logs confirmed the presence of liquids rich hydrocarbons in the Permian section.
- Kingston Rule-1 is being cased and suspended for fracture stimulation and production testing in early 2013.
- Senex has increased its stake in PEL 115 from 55% to 80%.

In the southern Cooper Basin, Senex completed drilling its fourth operated unconventional gas exploration well, Kingston Rule-1, in PEL 115 (Senex 80% and Operator, Orca Energy Limited (ASX: OGY) 20%). Kingston Rule-1 is located approximately 15 kilometres south east of Senex's successful unconventional gas exploration well Skipton-1 and approximately six kilometres north west of Senex's promising Talaq-1 unconventional gas exploration well (both in PEL 516, Senex 100%).

Weatherford Rig 826 reached total depth of 2,872 metres on 21 November 2012 is being cased and suspended ahead of fracture stimulation and production testing in early 2013.

Wireline logs indicate the well intersected nine metres of net gas pay in the Epsilon Formation and 44 metres of net gas pay in the Patchawarra Formation. In addition, the well intersected 84 metres of shale in the Roseneath Formation, 66 metres of shale in the Murteree Formation and nearly 20 metres of gas charged coal in the Patchawarra Formation.

During drilling and coring, high gas readings were recorded in the shales of the Epsilon Formation and the tight gas sands and deep coal seams of the Patchawarra Formation. Mud logs also confirmed the presence of liquids rich hydrocarbons in the Permian section.

Senex Managing Director Ian Davies said the results from Kingston Rule-1 confirm the Company's confidence in the unconventional gas potential of the southern Cooper Basin.

"Fifty-three metres of net gas pay is an excellent result. Coupled with the impressive quantum of shale and coal, the outcome continues to validate our strategic acquisition of Cooper Basin acreage over the last two years.

"We look forward to seeing the results of production testing at our four dedicated unconventional gas wells in the new year," he said.

In early 2013, Senex expects to commence a large scale hydraulic fracture stimulation program of its unconventional gas wells in the southern Cooper Basin to test gas quality and deliverability.

After Weatherford Rig 826 is released from Kingston Rule-1, it will move to Senex's northern Cooper Basin acreage to drill Paning-2, the first of its 12-well program announced in July 2012.
