Gaspe Lithium Project has potential to host a lithium in clay deposit with the project located within the Gaspe Peninsula in southeast Quebec.

A thorough desktop review of the historical exploration data available across the Mt Tremblant Project has identified a number of targets that require immediate follow up fieldwork:

- Several coarse-grained pegmatites (incl. tourmaline pegmatites) have been mapped throughout the Ross Project¹.
- A significant number of exploration targets interpreted as potential LCT Pegmatites have been mapped across the Cancet West Project².
- An historical government sampling programme returned extremely elevated stream sediment lithium (Max 342ppm Li2O) at **Gaspe³**.

During the Quarter Fin executed a services agreement with geological consulting firm Mercator Geological Services to provide field support at the Company's Mt Tremblant Lithium Properties. During the September quarter it is planned that geologists from Mercator will complete a multiple day helicopter supported field program to ground truth and complete preliminary bedrock sampling at the Cancet West and Ross projects.

Works Programme

Near-term works programme for the three project areas to include;

- In-depth review of historical datasets and mapped outcrop throughout the three projects
- High-resolution satellite imagery acquisition and interpretation
- Remote sensing and geophysics as required, with interpretation in conjunction with the historic datasets and satellite imagery, to highlight areas for ground-proofing and sampling within the upcoming summer season.
- Preparations for the upcoming field season are underway with commencement planned during Q3 2023.

McKenzie Springs Project

During the quarter FIN has continued to evaluate conducting a gridded soils program over the Springs Creek intrusive complex located north east of the project area once access is available during the upcoming dry season. The gridded soils programme will be designed to identify new drill targets for nickel, copper, graphite and other base/precious metals. A field trip to Mackenzie Springs has been planned for the Spring quarter by Fins Technical Adviser Tom Ridges and geological consultant Gary Powell.

Sol Mar Project

During the quarter FIN has been in active discussions with the holders of land rights, potential green power suppliers, counterparties for the development of a multiuser port at West Coolgra Point and potential offtake customers. FIN has also continued to progress studies through technical consultants and is continuing to focus on reducing capital costs for the project.

Appointment of Technical Advisor

During the Quarter, the Company appointed Mr Tom Ridges as technical advisor. Tom is responsible for project management of all geological and technical programs across all of FIN's assets. Tom is a geologist with more than 16 years' experience and a proven track record in gold and base metals exploration, mining, and project development. Tom's most recent roles include MD/CEO of Great Western Exploration (GTE.ASX) and Exploration Manager at Mineral Resources (MIN.ASX) where he led the team and undertook exploration, project evaluation, mine geology, and oversaw resource modelling.
